

EXHIBIT 2

Dr. Ungar's Position is Incorrect

Culliss **INCORRECT** 10(d) of the '420 Patent

Patent Claim Element	Culliss
10(preamble) . A search engine system comprising:	✓
(a) a system for scanning a network to make a demand search for informons relevant to a query from an individual user;	✓
(b) a content-based filter system for receiving the informons from the scanning system and for filtering the informons on the basis of applicable content profile data for relevance to the query; and	✗
(c) a feedback system for receiving collaborative feedback data from system users relative to informons considered by such users;	✓
(d) the filter system combining pertaining feedback data from the feedback system with the content profile data in filtering each informon for relevance to the query.	✗

DDX3.109

Bowm **INCORRECT** (d) of the '420 Patent

Patent Claim Element	Bowman
10 (preamble) . A search engine system comprising:	✓
(a) a system for scanning a network to make a demand search for informons relevant to a query from an individual user;	✓
(b) a content-based filter system for receiving the informons from the scanning system and for filtering the informons on the basis of applicable content profile data for relevance to the query; and	✗
(c) a feedback system for receiving collaborative feedback data from system users relative to informons considered by such users;	✓
(d) the filter system combining pertaining feedback data from the feedback system with the content profile data in filtering each informon for relevance to the query.	✗

0.002.4.9

Bowm **INCORRECT** (c) of the '664 Patent

Patent Claim Element	Bowman
(1)(preamble) A search system comprising:	✓
(a) a scanning system for searching for information relevant to a query associated with a first user in a plurality of users;	✓
(b) a feedback system for receiving information found to be relevant to the query by other users; and	✓
(c) a content-based filter system for combining the information from the feedback system with the information from the scanning system and for filtering the combined information for relevance to at least one of the query and the first user.	✗

0.002.3.1

Cullis **INCORRECT** (d) of the '420 Patent

Patent Claim Element	Culliss
10(preamble) . A search engine system comprising:	✓
(a) a system for scanning a network to make a demand search for informons relevant to a query from an individual user;	✓
(b) a content-based filter system for receiving the informons from the scanning system and for filtering the informons on the basis of applicable content profile data for relevance to the query; and	✗
(c) a feedback system for receiving collaborative feedback data from system users relative to informons considered by such users;	✓
(d) the filter system combining pertaining feedback data from the feedback system with the content profile data in filtering each informon for relevance to the query.	✗
